RESEARCH VESSEL MONTAGUE ANNUAL OPERATING REPORT 1995

Jim Vansant Dave Branshaw

Regional Information Report¹ No. 2A96-09

Alaska Department of Fish and Game Commercial Fisheries Management and Development Division, Central Region 333 Raspberry Road Anchorage, Alaska 99518

February 1996

¹ Contribution 2A96-09 from the Prince William Sound Area. The Regional Information Report Series was established in 1987 to provide an information access system for all unpublished Divisional reports. These reports frequently serve diverse ad hoc informational purposes or archive basic uninterpreted data. To accommodate timely reporting of recently collected information, reports in this series undergo only limited internal review and may contain preliminary data; this information may be subsequently finalized and published in the formal literature. Consequently, these reports should not be cited without prior approval of the author of the Commercial Fisheries Management and Development Division.

I. INTRODUCTION

The 1994 Annual Operating Report was developed to more detail than usual. It provided extra background information to smooth a change in regional supervision of the Montague. To eliminate unnecessary repetition and to simplify the report format, the 1995 report will include only those items pertinent to the 1995 operating season. Until enough significant changes occur in the background material to require an update, refer back to the 1994 report for general information on the Montague.

II. SAILING SCHEDULE - R/V MONTAGUE

A. SUMMARY

The Montague sailed 109 days in calendar 1995 and was in drydock (Petersburg) for an additional 30 days. Following are a table showing the completed sailing schedule and a brief synopsis describing the various trips. For more detail refer to the log sheets in the Appendix.

The number of days sailed was down from recent years. Beginning in January, 1995, a prolonged period of instability followed the resignation and transfer of two Cordova senior staff who were responsible for directing much of the vessel useage in PWS. Re-alignment of duties and the ensuing personnel shuffle were not complete until August, 1995, well after the peak of the field season. The lack of leadership until then caused the curtailment or cancellation of several trips.

Delays in getting out of the Petersburg shipyard resulted in a near non-stop activity from mid-August to mid-November. All of September was spent in Petersburg, and there were only 2 port days (used for turnarounds) in October.

A total of 20 days were sailed in behalf of OSIAR projects and were charged back at \$1000/day for vessel use. Of these 17 were in FY 96.

No more oceanographic work was done in 1995. The SEA project assumed all the sampling, surveys, and equipment. Spring deployment and fall recovery of the C-Lab 1 weather buoy occurred once again. The funding and supervision of the project was transferred to Dr. Eslinger at UAF. A new vessel use agreement was in progress at the end of the year.

II. SAILING SCHEDULE

C. SYNOPSIS

- Following is a brief synopsis of vessel activity for the Montague for calendar 1995:
- 3/21-3/22 PWS Fry Dig. Trip initially delayed a week due to cold weather, but still too cold streams frozen and pumps iced up. Returned to port until weather warmed up.
- 3/27-4/11 PWS Fry Dig. Second try with warmer weather, but still some frozen streams had to be bypassed.
- 4/16-4/18 Herring Hydroacoustics. Transported Forest Service crew (2) and camp freight to Rocky Bay on trip out. Made acoustic surveys with BioSonics echo integration gear and technician on herring biomass in Rocky and Zaikof Bays.
- 4/24-4/27 Herring Pathology Sampling. Haul supplies to Forest Service camp in Rocky Bay on way out. Contract seiner used to catch herring since they were all in deep water. Good weather and no delays.
- 4/29-5/2 Herring sampling for A.W.L., genetics and reproductive impairment studies. Used skiff seine and sinking gillnet. Scratch fishing for spawners.
- 5/8-5/9 AFK Freight Backhaul. Bring back herring pound structure that was to be used for tetracycline fry marking experiment that failed prematurely. (OSIAR)
- 5/12 Fuel Transport to herring spawn deposition project in Rocky Bay. Back haul misc. samples from herring project as well as freight from Forest Service field camp.
- 5/14-5/15 C-Lab 1 Buoy Deployment. Successful deployment of buoy.
- 5/22-5/27 PWS Marker Maintenance. Bad weather at beginning. Trip cut short for lack of personnel.

June trips cancelled.

- 7/1-7/8 Salmon Management. Multi-mission trip. Familiarize new manager w/gillnet districts and setnet sites. Camp freight to Eshamy weir. Fishery monitoring Esther and Main Bay. Construct range marker on Hodgkin Pt.-Esther Light line. General closed waters marker maintenance as time allowed. Exchange managers in Valdez Arm for Port Valdez Sub-district seine opener.
- 7/11-7/14 Copper River Dungeness Survey. Crummy weather for first part of trip. Experienced flooded back deck on way to Wingham Isl. See memo following this section.
- 7/24-8/3 Southwest District Purse Seine Test Fishery. Conducted test fishery and relayed data back to Cordova office.
- 8/16-8/19 Copper River Dungeness Survey. Good weather this time. Uneventful.

Tried another fluxgate compass this trip, but it reacted poorly to the roll of the boat. Re-connected magnetic compass.

8/23-8/29 Travel to Petersburg for Drydock. Stop in Juneau to send extra crewman home. Excellent weather for crossing.

8/30-9/29 See Petersburg Shipyard Report

9/30-10/5 Return to Cordova via Juneau for final electrical work and pickup extra crew for trip. Lost radar shortly after leaving P-burg. Sloppy weather and marginal forecast for crossing gulf, but got lucky on timing. Had to run w/ stabilizers deployed.

10/7-10/23 PWS Egg Dig. Long trip, but good test for new washer / drier / watermaker. Only 1/2 day lost to weather this trip.

10/25-11/2 PWS Spot Shrimp Survey. Uneventful. Right places at right times when weather was bad so no lost time.

11/12-11/14 Herring Pathology Sampling / C-Lab 1 Buoy Recovery. Two nights of sampling fish caught by contract seiner. Dodged another weather bullet. Exchanged crews by float plane and successfully recovered buoy on return trip to Cordova.

II. SAILING SCHEDULE C. SYNOPSIS 1. Deck Flooding Report

ALASKA DEPARTMENT OF FISH AND GAME

COMMERCIAL FISHERIES MANAGEMENT AND DEVELOPMENT DIVISION

MEMORANDUM

TO: James Brady

John Hilsinger CFMD - Anchorage

FROM: Jim Vansant

R/V Montague

DATE: 7.17.95

FILE: MONTSAFE.WP5

SUBJECT: Montague Safety

In keeping with the reporting of vessel safety concerns as discussed in this year's statewide vessels meeting, I have two items which I feel need attention. This memo is to report on an incident on the Montague. The other concern is addressed in a separate memo.

The incident occurred during the July dungeness survey in the Copper River River District with the Montague. On the first day of the trip (July 11) in transit from Cordova to Wingham Island we were running into a 20-25 knot easterly with accompanying steep wind seas averaging about 6 feet, sometimes higher. We were already running at reduced rpm and the boat was only making about 6.5 kt of headway. We took two closely spaced steep waves which completely flooded the deck from bow to stern - the second wave was scooped before the water cleared from the first. As the the bow gradually surfaced (the most buoyant portion of the vessel) the stern was completely submerged to the extent that the top of the main hatch cover was underwater. Even though we listed over about 10-15 degrees to starboard, the boat managed to resurface with no damage or loss of gear from the deck. All of the hatch covers and doors were secured and held so there was no flooding. Any internal flooding and the following loss of any buoyancy or significant shift of cargo would have been disastrous.

For the record we had about 5 hours of running time on a full fuel and water condition at the time. The loading configuration was 45 dungeness pots (90 lb ea) on the back deck and the two deck tanks for skiff gas (full). Lines, buoys, etc. were stowed below. The only loose gear on deck was the bait chopping box and 3 outboard fuel cans, all of which had been blocked in to keep from sliding, but floated up when the deck flooded. We were still 1000 lb short of the maximum allowable deck load for that fuel and water condition (but not much of a margin

for a 7500 lb max). Upon reaching safe anchorage, all the compartments were opened and found to be dry; water level alarms were also double-checked.

The only reassuring thing about all this was the fact that the vessel maintained its watertight integrity and recovered from the deck flooding. The unsettling aspects are: 1. how quick it happened. 2. no similar incidents in the 15 years I have been aboard in spite of encountering much worse conditions. 3. if a hatch cover had failed, Charly would have been trapped in the lab from the water pressure on the lab door. 4. if the deck cargo had been a large skiff it would have either flooded or floated; neither of which was desirable. 5. We are operating on a very thin margin of deck cargo capacity.

The most obvious action to improve things will be remove the deck tanks in future crab trips. Additionally I talked to Jonathan Parrott at Jensen Maritime. He agreed with that and suggested adding some freeing ports on the back deck and enlarging some of the ports in the well deck. We also discussed the implications of putting the bladder inserts in the water tanks from a stability point of view. The amount of lost volume may be a significant factor and will have to be evaluated when the true internal dimensions of the tanks are determined.

I do not think we are in a patently unsafe condition. However, it is obvious that we are operating on a thin margin. The best approach will be to continue our emergency preparedness routine and be watchful of potentially hazardous situations developing. We cannot always avoid localized rough water conditions. This recent event will undoubtedly cause me to be less aggressive in pressing the weather in the interests of external scheduling constraints.

FY-95 Allocations

Date:

Friday, April 14, 1995 18:16

The March 31 audit reports that you received this week from Jan have your new allocations for the balance of the fiscal year. Please pass along to your respective budget managers. With a few exceptions, we were able to cover most of what was requested in the Pre-Audit. In PWS the request for a new copy machine was one of the exceptions (Sorry Jo). Also Jo, you'll see that the CWT project is all screwed up and has some negative allocations. This is due to the anticipated credits from the co-operative agreements with PWSAC and VFDA and some outstanding AJE's to oil spill projects. This is one of the little remembrances that Sam left you.

Marnee, as a follow up to our discussion regarding how to better monitor the operations budget for the Pandalus, I think it will work best if you keep two sets of books as we discussed, an "official" set with Jan's numbers and an "unofficial" set with an allocation authorized by me that accounts for anticipated revenues. Paul can use the "unofficial" audit report you generate to know where he stands at anytime within the season. Jan's books will lag two or three months behind the unofficial books as the AJE's are posted.

Jo, you and Jim may want to do the same thing.

The "unofficial" line 200-500 allocations are as follows:

MONTAGUE OPERATIONS

Line 200	3.0
Line 300	4.3
Line 400	20.0
Line 500	10.0

PANDALUS OPERATIONS

Line 200	7.0
Line 300	13.2
Line 400	21.3
Line 500	1.5

III. BUDGET

B. CIP

1. Current

Following are the balance sheets for the FY95 and FY 96 CIP budgets allocated to Central Region Vessels and shared by the Pandalus and Montague.

The Petersburg drydock trip used the remaining balance in the FY 95 CIP budget and charged \$4.7k against the FY 96 allocation for the Montague (\$37.5k). Balance remaining is \$32.8k.

It is proposed to apply part of this to finishing some of the work started in Petersburg (Fo'c's'le finish, lab space finish re: watermaker/desktop, continuing fish hold rehab, any painting we can accomplish this summer).

RE: Another question

Date:

Wednesday, September 13, 1995 3:21PM

Hi JO.

I want to put the ship yard expenditures on the FY-94 CIP code first, until it is used up. Current balance around 13.8 according to Jan. The code is 11026161.

Once that code is used up put expenditures on the Fy-95 CIP (1102171) which has a balance of 30.5.

Judging from what Jim has told me we probably won't have to dip into the FY-96 CIP this go around.

As for Jim and Dave's travel, you can put that on the FY-94 CIP.

Cheers.

From: Mala, Jo To: Brady, James

Subject: Another question

Date: Tuesday, September 12, 1995 2:33PM

James Andrew - I forgot to ask you when you called about something else. Jim V. called from Petersburg and was talking about invoices arriving that will go on the CIP code for the Montague. Can I get that code from you? And he wanted to put his and Dave's travel and per diem costs on that also, and said to run that by you as well. Any problems with that??? Thanks! TTFN.

Jo,

III. BUDGET

B. CIP

2. Five Year Outlook

Refer to the Sept. 16, 1994, memo in the 1994 Annual Report for the last summary of CIP needs.

The Stability Book renewal to be conducted in early 1996 will include a report from the naval architect regarding methods, feasibilty, and approximate costs to improve the Montague's stability, serviceability, and safety margin. It is known from the original stability book (1988) that the Montague's stability picture is marginal with any kind of a deck load. Recent experience confirms this (see memo following schedule synopsis in section II C).

When the results of the stability book update are available, a new CIP outlook can be generated. Recent interest in purse seining and longlining with the Montague has been expressed by both research and management staff. Realistic evaluation of these options requires combining the following factors: new stability information, commentary by the naval architect, age of the vessel, and expected service life.

From the 1994 listing, any money directed to full fish hold remodelling will depend somewhat on the outcome described above and any decision to proceed with seining or longlining. The sonar replacement was done last year on operational money, and the stability review and GPS replacement are both requested in the FY 96 operations pre-audit. The other listed items still stand.

IV. TRAINING, CERTIFICATION, EXAMINATIONS

1995

Vansant: Cross-training trip on R/V Medeia (Sept., 1995) for Chatham Strait Black Cod Longline Survey. Motivation was to observe black cod survey technique for application to proposed survey in PWS with Montague. Also met several times w/Barry Bracken in Petersburg to discuss development of present survey.

Branshaw: Made successful application for permission to test for USCG Master's license. Self-guided study proceeding with Houston Marine PassPack materials and tapes.

Plans for 1996

Vansant: Renewal of Radar Observer certificate scheduled for Jan., 1996 at AVTEC in Seward. Renewal of USCG Master's license follows in March. Plan to take advantage of any opportunity for trips on other Dept. vessels. Would like to receive some formal training in GPS/GIS to augment mapping requirements we do on surveys, boundary marker placement, and enforcement actions.

Branshaw: Will proceed through examination process for USCG license. Plan first exam date in Feb., 1996, for Rules of the Road. Once license is in hand, propose AVTEC trip for Radar Observer certificate. Also proposing a trip to S.E. for a black cod trip on the Medeia in May if no schedule conflicts.

CPR cards for both expire this year.

V. MAINTENANCE

A. UPGRADE & UNSCHEDULED MAINTENANCE (In addition to regular winter maintenance list) (Also includes time spent on facilities maintenance)

1995

Montague:

January - Lab space repainted.

February - Wheelhouse window sill trays, stairs, hand rails, portlights repainted. Repair door on snowblower shack.

March - Galley floor repair. Rebuilt fuel primer pump on main engine.

May - Replace anchor light socket.

July - PTO overhaul. Including friction plate, pilot bearing, and clutch assembly. New starter for port genset.

September - See Shipyard Report (see V. B.)

November - Install new Red Dot heaters in fo'c's'le and fish hold (plumbed and wired).

December - Install new Red Dot heater in wheelhouse (plumbed and wired).

Facilities:

January - Install vents/grills in bunkhouse doors. Rewired bunkhouse porch light. Rewired and replaced photocell for office front door exterior light.

February - Hauled in two loads of gravel for warehouse approach. Cleaned up around perimeter of office building.

March - Warehouse cleanup (2 days).

April - Waste fuel processing in storage yard (10 days)

May - Waste fuel processing (5 days). Fuel storage site clean up (5 days).

June - New gas shack construction (10 days).

August - ATCO trailer removal and cleanup (1 day).

November - Repair warehouse chain hoist and control.

December - Gas shack construction (4 days)

B. 1995 PETERSBURG DRYDOCK

ALASKA DEPARTMENT OF FISH AND GAME

COMMERCIAL FISHERIES MANAGEMENT AND DEVELOPMENT DIVISION

MEMORANDUM

TO: James Brady

CFMD

Anchorage

FROM: Jim Vansant

R/V Montague

Cordova

DATE: Dec. 14, 1995

FILE: SHIPYD95.WP5

SUBJECT: Petersburg Shipyard

Report

The Montague was at Petersburg Shipwrights from August 28 - October 1,1995. Some final electrical work was performed in Juneau on October 3 before departing for Cordova. Including transit time each way, the boat was out of service for 6 weeks.

The main purpose of this year's drydock call was to address 2 capital improvement projects:

- 1) Stabilizing the fresh water tanks and installing a watermaker.
- 2) Rebuilding the forecastle to improve use of space and enclose exposed urethane foam insulation hazard.

A number of incidental jobs were also completed and will be detailed below.

Haulout

A new through-hull fitting was necessary for the watermaker. While the vessel was hauled out, the underwater hull was powerwashed and coated with Devoe #214 antifoulant. The waterline transition was cleaned and Devoe #229 Cobalt Blue applied up to the lower guards. The underwater hull had been primed and copper painted the previous year in Seward from bare metal, but weather conditions were marginal. It was felt a succeeding layer of paint would be a good measure to cover any thin spots. Last year's paint appeared intact. The hull zincs were in good condition, functioning as expected, and required no replacement. The hull and all underwater fittings were inspected and found to be in good order. A full set of new hull zincs were bought for any replacements which may be required in the 1996 inspection on the grid. The main engine keel cooler zincs were replaced on schedule.

The new through-hull fitting (1 1/2" reduced to 3/4" after the seacock) was installed on the starboard side as far forward as practical. Installation of the new watermaker in the lab space permitted use of some existing piping for the sea water supply that was previously from the lab fresh water tanks which were abandoned for fresh water use. All the water tanks were drained while on the ways. Sediment was hosed out of the 2 lab tanks and left open to ventilate and dry. The forward water tank was cleaned, scaled, and painted with 2 coats of Devoe #233 White for potable water tanks. Inspection of the lab water tanks showed no notable metal wastage in spite of the failed tank coating. It was decided that these tanks were in good enough condition to forgo any further attention for metal preservation other than refilling them with diesel oil to act as a long term preservative. Accordingly the piping was disconnected and blanked off since no use of the diesel as fuel is expected. The savings from the anticipated expense of preserving the lab tanks was diverted to other small but needed maintenance items and improvements.

The vessel remained on the ways for a week following the tank coating to give it the best temperature to cure before going back in the water. Work on demolition of the forecastle and scaling the tank top proceeded with the boat on the ways.

Forecastle Rebuild

Following demolition of the interior woodwork in the forecastle and prep of the water tank top (forecastle subfloor), the whole interior was painted with 2 coats of Devoe #235 to preserve exposed metal and seal exposed urethane foam insulation. The only notable rust was on the tank top and a few areas on the sides which had been poorly insulated in the original construction. Insulation in these areas was improved before it was covered. Reconstruction of the space continued throughout the remaining time in Petersburg. The new layout consists of 3 bunks, each longer than the originals, and more open storage space. The interior was sheathed with 1/2" plywood covered with a formica laminate. Covering all the exposed foam reduced the total useful volume in the space, but elimination of the fourth bunk restored more useful space. Time ran out for finish detail; even a month was short for such a project. The space only allowed 2 people at best to work together. Nevertheless it was 90-95% complete by the time we left the shipyard. In the meantime the heating radiator and fan assembly in the space was replaced, and a fitting welded on to the water tank cover to allow sounding the tank.

Later a leak was discovered in the new piping from the watermaker under the flooring from a bad weld. It was corrected with "Splashzone" since it would be under minimal pressure and appears to be holding.

Final finish involves some trim installation, relocating and adding a couple of lights, installation of shelving, and painting the engine room bulkhead.

Watermaker Installation

A Model 10/1300 HRO reverse osmosis desalinator was installed in the lab space. The seawater supply plumbing was detailed above. Brine water overboard was routed through existed plumbing for the lab sink drain pump. An extra check valve was required to keep the sink from filling. The system was wired for 208v / 3 phase power. Rearrangement of the lab electrical panel was required. The wash down pump was rewired for 220V operation to reduce sartup loading on the electrical system. It was apparent that a separate power panel would be required to accommodate the electrical needs in the fish hold, now that a washer/dryer were possible with the

watermaker present. Parts and further electrician time were unavailable in Petersburg, but were scheduled in to be done in Juneau en route back to Cordova. Installation was pretty straight-forward. The system was bought as a component package rather than an integrated module to allow for flexibility in component placement in a limited space. Extra pre-filtration and a UV sterilizer for the product output were added to the standard package. Once the start-up shakedown was completed, the system has performed to expectations. Some final finish work is also needed in the lab. Guards to protect the equipment components and a remodeled desktop will be helpful. Past that further finish work in the lab should be deferred until it can be gutted and the woodwork replaced in order to de-rust, paint, and insulate the inaccessible areas.

Miscellaneous

Fish Hold

With a watermaker, a washer/dryer became possible. Conventional units were installed in the fish hold. The overboard discharge was plumbed into an existing through-hull fitting and the dryer exhaust was routed through newly installed fish hold vents (detailed below). Hot and cold water lines were teed into the fish hold from the lab space for the washer. A separate electrical panel was also added for this and other requirements.

A fan-boosted heater was installed in the fish hold. It was teed off of piping in the lab space and powered from the new electrical panel. It has proven very effective in keeping the fish hold and its contents dry. Two deck vents were also installed to add air circulation to the hold. Of course they must be secured when underway. Some water leakage was noted around them which will require attention when the weather warms up and they can be re-bedded.

Initial use of the new equipment has provided a notable improvement in living conditions aboard the Montague.

Deck

A removeable aluminum pipe railing was fabricated for the back deck to reduce hazard to personnel due to the low rail height around the seine deck. If seining is ever conducted, the railing is easily removed.

The pivot pins for the stabilizer poles were rebuilt to ease deployment and retrieval of the stabilizers. Grease fittings were also installed.

Freeing port area was increased by doubling the heights of the aft-most pair on the well deck and adding a pair of double height ports to the forward-most part of the seine deck. This modification was prompted by the slow draining of a flooded work deck this past summer, and was recommended by Jensen Maritime Consultants.

Other: 1) Extra step added to mast to make light replacement and paint maintenance safer. 2) Pin holes in furnace exhaust repaired. 3) Round bar added to top deck overhang to provide snag free surface for handling boat's inflatable and life raft. 3) Leaking control valve on anchor winch replaced and old one rebuilt for spare. 4) Some minor paint touch-up was also done, but generally wet weather prevented any serious efforts at painting.

Injectors replaced w/ spares. Replacements ordered. CAT P/N 8N3176 "NOZZLE A"

LAST MAJOR MAINTENANCE ITEMS:

Jan. 2, 1991 - Head replaced w/ remanufactured unit: 19,930 hrs (2780 SMOH)

July 2, 1991 - Turbocharger replaced: 20,454 hrs (3304 SMOH)

Aug. 8, 1995 - PTO rebuilt. Friction plate, pressure plate assembly, pilot bearing, and drive belt replaced: 24,050 hrs (6900 SMOH)

ALASKA DEPARTMENT OF FISH AND GAME R/V MONTAGUE

STARBOARD AUXILIARY VALVE ADJUSTMENT DECEMBER 13, 1995 PERKINS 4.236 (#107)

Hrs since last adjustment: 700

Hrs S.M.O.H.: 16,000 Hrs total: 26,400

Valve settings as found:

CYLINDER	INTAKE	EXHAUST
1.	.013	.012
2	.013	.012
3	.013	.000 *
4	.0013	.010

(Note No. 3 exhaust valve was loose last time, .028)

INTAKE VALVES SET @ .012 EXHAUST VALVES SET @ .012

Dec. 13, 1995 - Injectors sent out for rebuild.
